Total loading not to exceed maximum current shown above at 50°C. Derates linearly to 50% at 70°C. See Op. Temp. Specifications	
Output Voltage Setpoint	Factory preset within ±0.5% of nominal voltage
Line/ Load Regulation	<±1% at the sense point over full AC input range and 0 – 100% output loading, with sense leads connected
Minimum Loading	None required
Output Turn-on Delay	<1sec from AC turn-on. <100msec from remote enable
Over/ Under Shoot	None at turn-on or turn-off
Stability	Output drift <±0.2% after 20 minute warm-up
Temperature Coefficient	<±0.02%/°C, 0° - 50°C, after 20 minute warm-up

Over Current/ Short Circuit Protection	Standard hiccup (cycles on/off) current limit when output current is 105% to 120% of full load
Over Voltage Protection	Non-crowbar type. V-out exceeding 25% ±10% of nominal will cause output to latch off. Remote enable or AC input recycle required to reset
SIGNALS, INDICATORS AND CONTROLS	
Remote Enable	Enabled by closed circuit or TTL logic 0. Disabled by open circuit or TTL logic 1
Remote Adjust	External 0-5V DC on remote adjust pin referenced to negative sense equals -5% to +5% change of nominal output voltage
Power Good (DC-OK) Signal	High signal when V-out is above 97% of nominal voltage. Signal goes low when V-out drops below 95% of nominal

**Specifications subject to change without notice.*

Power Fail Warning	Loss of input AC causes a TTL compatible signal to go low >4msec prior to any output dropping out of regulation. At AC turn-on, signal stays low until output is in regulation
Under Voltage Warning	Output dropping below 95% of nominal triggers the power fail warning signal
LED Indicator	Front panel mounted, single-color LED. Green indicates AC power ON and output within regulation. Off indicates an input and/or output fault
AC On/ Off Switch	Optional. Single pole, rocker type, on the front panel. Rocker face marked "I O". See option "O" in model configuration codes below. Not available in combination with optional IEC AC inlet
